A door holder door stop that uses magnetic force to hold a door in an open position adjacent an interior wall. The door holder door stop includes an elongated arm having a first end and a second end, a screw disposed at the second end, the screw to fixedly secure the arm to the wall. A magnetic surface is disposed on a magnetic head, the magnetic head attached at the first end of the arm. The door holder door stop further includes a metal plate having a first side and a second side. The second side having an adhesive surface to fixedly secure the plate to the door. When the door is opened and moved to towards the wall, the first side of the metal plate is attracted to the metal surface of the arm, and therefore the door is retained in the open position.
